

## WHAT IS WRONG WITH PET WASTE?

Fecal matter contains nutrients, which cause weeds and algae to grow more rapidly than normal. Excess weeds and algal growth changes the balance of the ecosystem. Decaying plant material uses oxygen, which reduces available oxygen essential for life for fish and other aquatic species.

Pet waste can also contain pathogens such as bacteria, viruses, and parasitic worms which can transmit disease to humans. When high levels of bacteria are found in a body of water, fishing and shellfish harvesting are restricted because of the threat posed for humans.

# PROPER PET WASTE DISPOSAL

## WHAT IF I DON'T LIVE NEAR THE WATER?

It may not be apparent to you, especially if you don't live next to a body of water, how your pet's waste affects the water quality of lakes, streams, and marine waters in our area. To understand the connection, it is helpful to understand how stormwater runoff works.

Catch basins, manholes, and grass ditches at the edge of your property collect water runoff and direct it to the closest body of water. Typically, stormwater never passes through a sanitary sewer treatment facility. In other words, anything from the ground may eventually end up in a nearby waterway.

## WHEN WALKING:

Bring plastic bags with you when you walk your dog. Use a bag to pick up the dog waste then tie the waste bag closed and place it in a nearby trashcan.

## AT HOME:

Double bag dog waste and kitty litter. Tie it securely and place it in the garbage. Long handled "pooper scoopers" are available at pet stores making it easy to pick up after your dog without bending over.

## Clean Water, Clean Parks, Clean Shoes

Pet waste left on the ground, especially near streets and sidewalks, gets washed into storm drains and the drainage system which flows to your local waterways **without being treated!** Bacteria, parasites, and viruses found in pet waste can be harmful to water quality and human health. Not only is picking up after your pooch the neighborly thing to do, it's the healthy thing to do for you and the environment.

## DO NOT FLUSH PET WASTE DOWN THE TOILET

Septic systems and wastewater treatment plants are not designed to treat dog or cat waste.

## DO NOT COMPOST PET WASTE

The disease causing organisms in pet waste are very sturdy and are not killed by backyard composting.

## WATCH WHAT YOU FEED YOUR PET

The type of food you give your pet will affect the quantity of pet waste you must deal with. Rice based food is the most easily digested. Consult your vet if you have any questions.

## CONTROL WHERE YOUR PET RELIEVES THEMSELF

Wherever you are this is a good idea; at home or out and about, pet waste needs to be scooped!
